

WHO HORSES ARE

Examples:

- ♥ Instinct
- ♥ Super sensory systems
- ♥ Flight line
- ♥ How horses learn
- ♥ Effect of hormones
- ♥ Foot falls
- ♥ Intelligence
- ♥ Feelings
- ♥ Sleep

Learning who horses really are, their general needs and basically understanding why they do the things they do help to reduce frustrations, accidents and is proven to develop better relationships all around.

In my experience the ones that are often in trouble are the ones who treat horses like humans and not like horses. Horses are horses and they are very different to us. Yet in some small ways they are like us too and that is why it is easy to make this mistake.
